

NEW PRODUCTS RELEASE DECEMBER 2020

CATERPILLAR® 7000 SERIES NOZZLES

D104-9453 - Nozzle Assy (double injection)

D104-9453 INJECTOR CHARACTERISTICS

- ✓ This fuel nozzle uses an internal valve with a two-stage relief action. During the first portion of the valve movement, an audible click can be heard and a small amount of fuel will be released. As valve opening pressure is achieved, the second portion of the valve movement begins the injection cycle.
- ✓ The injector is therefore more fat than the others 7000 series.
- ✓ Developed, manufactured and tested in our Magenta, Italy facility.
